

# TESTING & QUALITY ASSURANCE

Is your organization willing to pay the price of an app that doesn't work?  
Such a risk is no longer an option

Quality is a key factor in the development of successful projects. You can attain quality by implementing Testing & QA practices from the start of the project. Our mission is to aid our customers in developing innovative and reliable applications with coordinated efforts to find agile solutions to any problem.

### WHY GENEXUS CONSULTING?

- We are a team of **professionals specialized** in a variety of disciplines regarding the testing of applications, and all of our testers are certified by ISTQB international.
- We have vast experience in testing **design, automation and execution** for mission critical systems developed with GeneXus.
- We use different automation and load simulation tools such as GXtest, JMeter, SoapUI, and Selenium, among others.
- Our methods have been tested across many different business areas.

# LINE OF SERVICES

## Functional Testing

You can reduce risks at the time of implementing systems by including verification activities that enable the detection of critical errors prior to production rollout, thus reducing project costs and increasing user satisfaction.

## Automated Testing

When releasing a new version, you can reduce the time consumed in developing and avoid bottlenecks by implementing automated regression tests. Our team's knowledge will be an aid for designing and implementing your automation strategy, while also ensuring testing maintenance and evolution.

## Performance Testing

Avoid performance problems while improving your systems' stability by executing load tests throughout the entire development lifecycle. Our specialists in application optimizations will help you detect the origin of problems and find the most adequate solutions to solve them.

## Mobile Application Testing

Improve the user experience of your mobile applications and prevent complications relative to usability, performance and security. By carrying out different types of tests on actual devices, we can help you to release robust applications that are compatible across a large range of different devices and platforms.

## Security Testing

Through security testing based on the OWASP Top 10 ranking, you can prevent your systems from the most significant vulnerabilities. The testing performed from the perspective of an attacker enables you to assess the effectiveness of the security controls implemented and thereby identify potential threats.

## Consultancy services in Application Testing

Define a process of optimized and profitable tests for your organization, based on the industry's best practices, customized to best suit your specific needs. Our team of experts is capable of analyzing your organization's current situation to recommend enhancements and suggest the best testing methodology for your team to adopt.
